### (54) TWO-FUNCTION CATHETER HANDLE

(57)Abstract:

**PROBLEM TO BE SOLVED:** To provide a catheter handle enabling simultaneous move of a plurality of wires to the base end side in relation to the main body of the catheter.

**SOLUTION:** The catheter handle comprises a handle housing having a base end part, a fore end part and the substantially hollow inside, a first movable member which has a base end part fitted to the inside of the handle housing and a fore end part extending outside the housing and is also movable in the longitudinal direction in relation to the housing, a second movable member which is provided inside the housing and is also movable in the longitudinal direction in relation to the housing and a rotating member which can move the second movable member in the longitudinal direction by rotation and is fitted to the housing.
